

## JOB POSITION

### - JUNIOR SOFTWARE DEVELOPER -

#### About the role

At Verso Altima Group we are always on the lookout for motivated junior software developers who want to gain and build their knowledge working with experienced developers from our software development team. As a junior software developer, you will be part of a friendly and open atmosphere, having a mentor to guide you through your professional career by working on different types of projects, including Telco, IoT (*Internet of Things*), E-commerce domains, with the use of modern technologies.

#### What can you expect?

- An assigned mentor who will guide you through onboarding process and throughout your work and career.
- Individual 1 on 1 meetings with the team lead to continuously work on your career and professional goals.
- Flexible working hours and remote work arrangements.
- Work as a member of the development team in a friendly atmosphere that encourages open dialogue.
- Follow global software development best practices.
- Being part of the integration projects including other cross-functional teams and areas (Internet of Things, networking, e-commerce) along with software development.
- Internal presentations and seminars to expand your knowledge, as well as attending conferences and certificates.
- Many different benefits, such as a yearly general paid medical exam, multi-sport card, teamwork, etc.

#### What do we expect from you?

- Development, testing and deployment of technical and business aspects of various software modules from different domains (E-commerce, Telco, IoT).
- Providing L1 and occasionally L2 support for Altima modules and deliverables.
- Following development standards and guidelines established by the team.
- Collaboration with management and support teams, besides the development team.
- Eager to learn new technologies and business processes independently of the domain.

- Write clean and reusable code, giving special attention to unit and integration testing.
- Invest in personal growth.
- Highly motivated and persistent.
- Excellent self-organisation and planning abilities.

### Minimum requirements

- Familiarity with Web-based technologies such as HTML, CSS, and JavaScript.
- Basic knowledge of Java SE.
- Basic knowledge of relational databases.
- Basic knowledge of Git.
- Familiarity with various software development processes.
- Basic knowledge of object-oriented programming, design patterns and general best practices in development.
- Ability to use Windows & Linux operating system.
- Medium level of proficiency in technical English language, since all documentation is in English.
- Less than one year of business experience.
- Minimum of Bachelor's degree in Computer Science or related area.

### Following expertise are nice to have, but not mandatory

- Basic knowledge or experience with Spring and/or Java EE.
- Experience working with GitLab.
- Experience with different testing tools (e.g. SoapUI) and automated testing frameworks.
- Familiarity with Typescript.
- Familiarity with Angular or similar JS framework.

### About us
