

## JOB POSITION

### - NETWORK ARCHITECT & ORCHESTRATION EXPERT -

#### About the role

At Verso Altima group we are looking for a self-driven and motivated IP network architect who has aspiration to become automation and orchestration guru. You will combine your in-depth IP networking knowledge along with orchestration tools such as Cisco NSO and python programming to automate and orchestrate service provisioning in dynamic network environment such as telecoms. In this process you will collaborate closely with technical lead, team member and customers.

#### What can you expect

- An assigned mentor who will guide you through the onboarding process and project activities
- Individual 1 on 1 meetings with the team lead to continuously work on your career and professional goals
- Flexible working hours and remote work arrangements
- Working as part of the orchestration team with best experts at its field in a friendly atmosphere encouraging open discussions and result with best possible solutions
- Following best practices in creation of service models in multivendor environment
- Opportunity to perform interesting and challenging research, evaluations, and deep technical analysis of various tools and applications to find the best solution for problem at stake
- Working with innovative and cutting-edge technologies for the purpose of fulfilling customers' requirements on their journey to zero touch provisioning
- Internal presentations and seminars to advance your knowledge, along with conference attendance and certificates
- Lots of different benefits such as paid yearly general medical examination, Multisport card, team building, etc.
- Competitive salary

#### What do we expect from you?

- A self-driven, independent senior team member, capable to gather requirements, doing analysis and design of a business application
- Supporting the whole lifecycle of service provisioning in telecom or large enterprise environment
- Analysis of existing state of customers network environment, giving recommendations for improvement and assessing readiness for orchestration
- Willing to learn and share knowledge about business processes in targeted industry
- Following automation and orchestration standards and guidelines agreed with the team
- Collaboration with management and support teams
- Following industry trends and ensuring alignment across technology portfolios
- Technical support to KAMs throughout pre-sales, sales and post-sales activities
- Supporting preparations of demos and PoCs
- Presentation of technical solutions to the customer
- Support to KAMs during the presentation of proposals
- Creative problem solving
- Readiness for occasional travel
- Clear communication with knowledge-transfer capabilities

### Minimum requirements

- Experience with design, implementation, optimization and troubleshooting of service provider and enterprise IP networks
- Willingness to become proficient in Python programming for the purpose of service modelling
- Advanced knowledge of IP network solutions in large enterprises or service providers
- Advanced knowledge of IP/MPLS, BGP, OSPF and other network protocols
- Advanced knowledge of L2 and L3 VPN service implementation
- Experience with translation of business requirements into technical network solutions
- Experience with writing detailed technical and business documentation
- Experience with creating and leading technical presentations to customers and different stakeholders

### Following expertise is nice to have, but not mandatory

- CCIE certificate
- Experienced with Python programming
- Good knowledge of Linux OS
